

Developmental Care-A Simulated Approach

- Developmental care is crucial for the sickest smallest babies
- It is difficult to deliver and most people prioritise T-ABC. We want you to think about T-ABC and D when possible
- This work shop will cover a simulated approach to how we teach and train staff in the NNU at Southampton with regards to developmental care using low fidelity manikins. The model is reproducible.
- We aim to have an interactive roundtable discussion about methods all over the UK and abroad.
